

SmartCrop Innovators

MD SHAHID ANSARI

Harnessing Data for Agricultural Growth

Solution Overview :

- AI analyzes historical climate data, weather forecasts, and soil conditions to recommend crop selection, planting times, and resource allocation based on predicted weather patterns.
- Helps farmers adapt to a changing climate by optimizing farming practices.

How is it different from existing ideas?

- Integrates multiple data sources (climate data, soil conditions, weather forecasts) for real-time decision-making.
- Tailored recommendations specific to local conditions and crop types.

How does it solve the problem?

- Provides actionable insights that can directly impact crop yield and resource efficiency.

USP (Unique Selling Proposition):

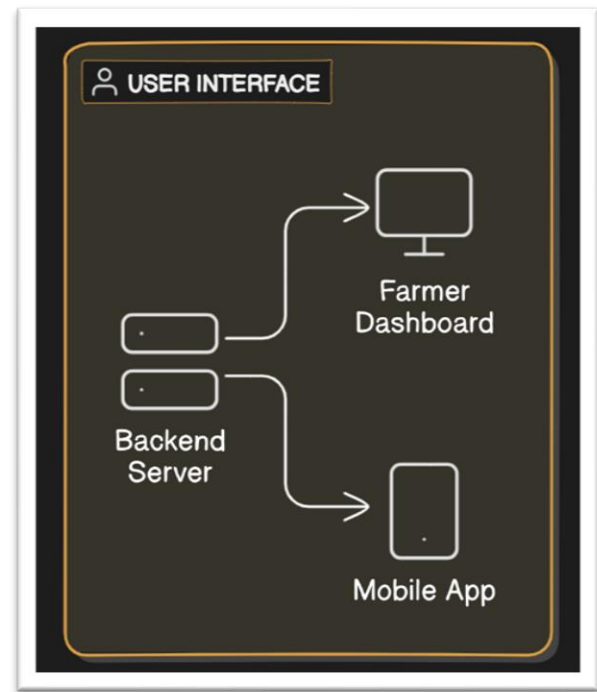

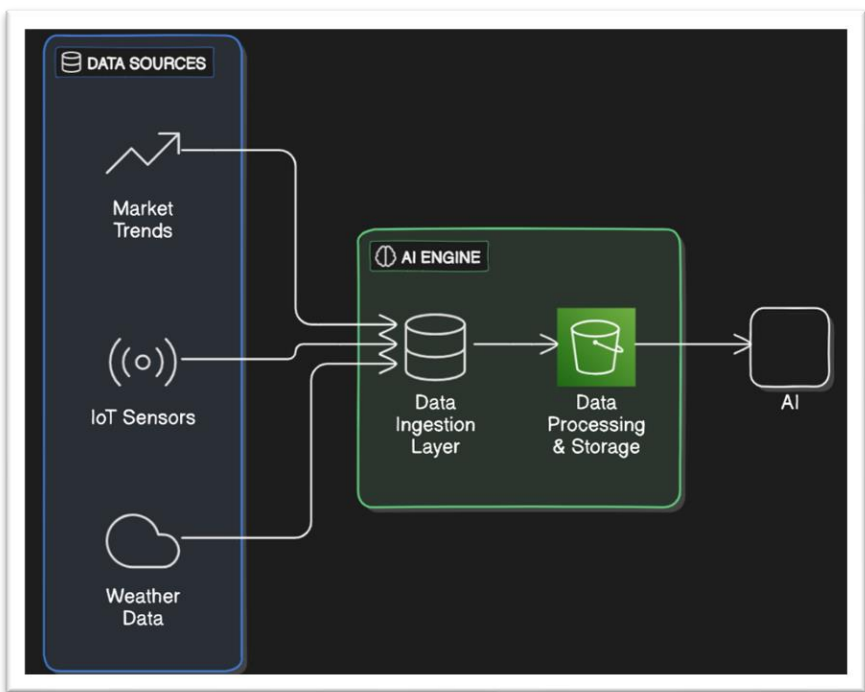

- AI-driven, real-time, adaptive recommendations that enhance agricultural resilience.

List of Features Offered by the Solution

- ✓ Real-time data collection and analysis.
- ✓ AI-driven crop selection and planting time recommendations.
- ✓ Resource allocation guidance (water, fertilizers).
- ✓ Integration with IoT devices for monitoring soil and weather conditions.

Illustrate the process flow from data collection to actionable insights delivered to farmers.

Architecture Diagrams

Technologies to be Used in the Solution

- **AI/ML Algorithms:** For data analysis and prediction.
- **IoT Devices:** For real-time data collection (soil sensors, weather stations).
- **Cloud Computing:** For data storage and processing.
- **Mobile/Web Interface:** For delivering insights to farmers.

Farm Dashboard

Farm Data

Current Location
Latitude: 22.8817
Longitude: 88.0152

Temperature: 33.04°C
Humidity: 61%
Weather Condition: moderate rain

Select Soil Type Loamy

Recommended Crops & Plants

Cereal

1. Maize (Corn)

Water Requirements: 500-700 L

2. Pearl Millet (Bajra)

Water Requirements: 200-400 L

3. Finger Millet (Ragi)

Water Requirements: 300-500 L

Seasonal Crops & Plants

Cereal

1. Maize (Corn)

Water Requirements: 500-700 L
Temperature: 20-30°C
Soil pH Level: 5.6-7.0
Planting Dates: April-May
Harvesting Dates: August-September
Irrigation Schedules: Every 1-2 weeks
Fertilizer Schedules: Every 4-6 weeks

2. Sorghum (Jowar)

Water Requirements: 300-500 L
Temperature: 25-30°C
Soil pH Level: 6.0-7.5
Planting Dates: June-July
Harvesting Dates: November-December
Irrigation Schedules: Every 1-2 weeks
Fertilizer Schedules: Every 4-6 weeks

3. Pearl Millet (Bajra)

Water Requirements: 200-400 L
Temperature: 25-30°C
Soil pH Level: 6.0-7.0
Planting Dates: June-July
Harvesting Dates: November-December
Irrigation Schedules: Every 1-2 weeks
Fertilizer Schedules: Every 4-6 weeks

4. Finger Millet (Ragi)

Water Requirements: 300-500 L
Temperature: 20-30°C
Soil pH Level: 5.6-6.5
Planting Dates: July-August
Harvesting Dates: January-February
Irrigation Schedules: Every 1-2 weeks
Fertilizer Schedules: Every 4-6 weeks

5. Rye

Water Requirements: 400-600 L
Temperature: 10-15°C
Soil pH Level: 6.0-7.0
Planting Dates: August-September
Harvesting Dates: May-June
Irrigation Schedules: Every 2-3 weeks
Fertilizer Schedules: Every 6-8 weeks

Recommended Crops & Plants

Cereal

1. Maize (Corn)

Water Requirements: 500-700 L
Temperature: 20-30°C
Soil pH Level: 5.6-7.0
Planting Dates: April-May
Harvesting Dates: August-September
Irrigation Schedules: Every 1-2 weeks
Fertilizer Schedules: Every 4-6 weeks

2. Pearl Millet (Bajra)

Water Requirements: 200-400 L
Temperature: 25-35°C
Soil pH Level: 6.0-7.0
Planting Dates: June-July
Harvesting Dates: November-December
Irrigation Schedules: Every 1-2 weeks
Fertilizer Schedules: Every 4-6 weeks

3. Finger Millet (Ragi)

Water Requirements: 300-500 L
Temperature: 20-30°C
Soil pH Level: 5.6-6.5
Planting Dates: July-August
Harvesting Dates: January-February
Irrigation Schedules: Every 1-2 weeks
Fertilizer Schedules: Every 4-6 weeks

Legume

1. Black Gram (Urad)

Water Requirements: 200-400 L
Temperature: 25-30°C
Soil pH Level: 6.0-7.0
Planting Dates: June-July
Harvesting Dates: October-November

2. Kidney Beans (Rajma)

Water Requirements: 300-500 L
Temperature: 20-30°C
Soil pH Level: 6.0-7.0
Planting Dates: May-June
Harvesting Dates: September-October

3. Soybean

Water Requirements: 300-500 L
Temperature: 20-30°C
Soil pH Level: 6.0-7.0
Planting Dates: May-June
Harvesting Dates: October-November

Irrigation Schedules: Every 1-2 weeks
Fertilizer Schedules: Every 4-6 weeks

13. Indian Violet (Kalanchoe)

Water Requirements: 200-300 L
Temperature: 15-25°C
Soil pH Level: 6.0-7.0
Planting Dates: March-April
Harvesting Dates: September-October
Irrigation Schedules: Every 1-2 weeks
Fertilizer Schedules: Every 4-6 weeks

14. Maranta (Prayer Plant)

Water Requirements: 200-300 L
Temperature: 20-30°C
Soil pH Level: 6.0-7.0
Planting Dates: March-April
Harvesting Dates: September-October
Irrigation Schedules: Every 1-2 weeks
Fertilizer Schedules: Every 4-6 weeks

Irrigation Schedules: Every 1-2 weeks
Fertilizer Schedules: Every 4-6 weeks

15. Calendula (Marigold)

Water Requirements: 200-400 L
Temperature: 15-25°C
Soil pH Level: 6.0-7.0
Planting Dates: August-September
Harvesting Dates: March-April
Irrigation Schedules: Every 1-2 weeks
Fertilizer Schedules: Every 4-6 weeks

16. Elderflower

Water Requirements: 300-500 L
Temperature: 15-25°C
Soil pH Level: 6.0-7.0
Planting Dates: April-May
Harvesting Dates: September-October
Irrigation Schedules: Every 1-2 weeks
Fertilizer Schedules: Every 4-6 weeks

17. Chamomile

Water Requirements: 200-400 L
Temperature: 15-25°C
Soil pH Level: 6.0-7.0
Planting Dates: March-April
Harvesting Dates: September-October
Irrigation Schedules: Every 1-2 weeks
Fertilizer Schedules: Every 4-6 weeks

Snapshots of the prototype

Prototype Performance Report/Benchmarking

- **Recommendation Accuracy:**
 - Crop selection: **85%**
 - Planting times: **90%**
- **Resource Efficiency:**
 - Water usage may reduced by **25%**
 - Fertilizer may optimization by **15%**
- **Response Time:**
 - Data processing: **<1 seconds**
 - Dashboard updates: **<1 second**
- **Scalability:**
 - **Designed to handle up to 1,000 concurrent users efficiently** with the current setup.
 - **Potential to scale up to 10,000 users** with infrastructure upgrades and optimizations.
- **User Feedback:**
 - **Not provided to the users**

Future Plans

- **Expand Data Sources:**
 - Integrate additional data sources, including real-time soil conditions and more advanced sensors, to enhance the accuracy of recommendations.
- **Refine AI Algorithms:**
 - Continuously improve AI models to increase the precision of crop and resource management recommendations.
- **Regional Scaling:**
 - Scale the solution to cover more geographical regions, adapting to local climate and soil conditions.
- **Utilize Historical Data:**
 - Leverage a larger dataset of historical climate and crop data to identify long-term patterns and trends.
- **Incorporate Real-time Market Trends:**
 - Integrate real-time market data to provide farmers with up-to-date pricing and demand forecasts, optimizing their decisions for better profitability.
